

Late Night

trumpet, trombone, double bass, drumset, electronic sounds, video

Simon Bahr

2023

Preface

Instruments

Trumpet (Bb) | Trombone | Double Bass | Drumset

The score is not in C. Accidentals apply for the rest of the respective bar.

Synchronising instruments and computer

In *Late Night*, an ensemble consisting of four players is accompanied by a pre-produced video plus soundtrack. Synchronisation between ensemble and video is achieved using a prepared clicktrack that the drummer follows. The click can either be used as a continuous metronome (click on / click off) or as a singular marker, instructing the player to continue to the next passage (click). The other players follow the drummer. Therefore, all players are asked to play from the score if possible; they must at least be able to read the drumset part during performance (or know it by hard). In “*ad lib.*”-sections, the ensemble may in addition agree upon musical signals for moving on the next section, etc.

ad lib.

In passages marked “*ad lib.*”, players are instructed to improvise, taking into account any given restrictions of musical material. For example:

ad lib. [18"]

60

very short notes, long rests

ppp or *fff*

This instructs the trumpet player to play short notes that are either very loud or very soft, using any pitches within given range. (It is of cause possible to play multiple notes without a rest.) The section lasts for 18 seconds.

C

ad lib. [25"]

72

short notes

p ⇌ *f*

This instructs the trumpet player to play short notes (and rests of any duration) in a dynamic range between piano and forte (in other words: not extremely loud and not extremely soft), using the notes of the given scale as pitch material. The section lasts for 25 seconds.

If a musical parameter (pitch or drum / dynamics / note duration / playing technique / etc.) is not specified, all possible options available on the instrument can be used. Accordingly, an “*ad lib.*”-section with no further indications at all would encourage the player to improvise freely. However (un-)limited the material for an improvised passage may be, players should always try to connect from the previous and to the next section in a musically meaningful way.

In some “*ad lib.*”-sections, a starting and a target set of restrictions are given (“transition to...”). In this case, the player should gradually transition from one material to the other within the indicated time frame at their own pace.

continue sim.

In contrast to “*ad lib.*”, the indication “*continue sim.*” instructs the player to come up with variations of the musical ideas formulated in the previous measure(s). The sounding result should closely resemble the previous material.

“*continue sim.*” also occurs in combination with “*ad lib.*”, in which case the player should simply keep on improvising according to the restrictions of the respective “*ad lib.*”-measure.
